

State-of-the-Art High School Receives NAPA QIC Award

Sitting on more than 85 acres, Gainesville High School in Gainesville, Virginia accommodates 2,447 high schoolers. This sprawling, state-of-the-art campus is a NAPA Quality in Construction award winner. Using more than 30,000 tons of asphalt, Superior Paving Corporation provided pavement on an array of pavement types: walking trails, tennis courts, basketball courts, competitive running tracks with strict tolerance requirements, long jump segments, light-duty parking bays, heavy-duty travel paths, a heavy-duty bus loop, and an extension of University Boulevard, a Virginia DOT owned road. Despite being constructed during COVID and also working with unfavorable soils, Superior Paving was able to complete the work in a timely manner due to asphalt's inherent speed of construction. The owner, Prince William County, and the general contractor, Dustin Construction, were extremely pleased with the asphalt work constructed by Superior Paving.

"At Gainesville High School, we utilized the versatility of asphalt to create a diverse range of surfaces that met the unique requirements of both students and faculty. The outcome was an exceptional asphalt solution for a cutting-edge campus."
